## CODENOMICON SERVICES

### TESTING SERVICES

- Contract robustness and fuzz testing
- Custom test development
- Security test lab management

### AUDIT SERVICES

- Attack surface analysis
- Security audit services
- Vulnerability reporting
- Security audit management

### TRAINING SERVICES

- Fuzzing training
- Defensics training
- Custom training

## Testing services

### » CONTRACT TESTING:

Most organizations lack time and resources to carry out testing. By appointing a Codenomicon test specialist you can also benefit from our extensive experience in robustness testing and fuzzing tools. You can hire our expert resources for a pay-for-service engagement.

### » CUSTOM TEST TOOLS:

Many companies use proprietary protocols in internal interfaces between devices from the same vendor, and proprietary extensions are written to extend the functionality of public standards. Ask Codenomicon develop custom test tools for your proprietary protocols, protocol extensions or internal interface points.

### » SECURITY TEST LAB MANAGEMENT:

Codenomicon's security test lab management services help you to manage your security findings with vendor and outsourcing communities, and to provide the auditing capability of abstracted results up to your customers.

## Auditing services

### » ATTACK SURFACE ANALYSIS:

Modern networks are mixtures of applications and components from various suppliers; nobody has an overall picture of the tested system. We can help you see what is really going on in your network, allowing you to base your testing on facts rather than assumptions.

### » SECURITY AUDITING:

Fixing unknown vulnerabilities can be a challenge. For one thing, there are no ready patches. We will help you with reconfigurations and workarounds, until we can find and fix the root causes behind the discovered vulnerabilities.

### » VULNERABILITY REPORTING:

If you find a previously unknown vulnerability, you need to communicate your findings to affected parties. Codenomicon works with a majority of software vendors and device manufacturers, and has trusted contacts that make this communication process less problematic.

### » SECURITY AUDIT MANAGEMENT:

Interpreting the auditing reports can sometimes be difficult. We can help you get more out of your security audits by providing you with the right infrastructure, tools and services. Through our extensive network of contacts and partners, we can also help you find the security expertise you need.

## Training services

Deploying new tools, especially if they employ a completely new technology, can be challenging. Get a smooth start by hiring us to train your quality assurance and security analyst engineers in the fuzzing method, or in Codenomicon Defensics installation, operation and best practices. We also provide custom training. Extensions are written to extend the functionality of public standards. Ask Codenomicon develop custom test tools for your proprietary protocols, protocol extensions or internal interface points.
